

Fiscal Cost of Indonesia’s Data Centre Tax Incentive Regime

March 2025

Overview

Indonesia’s data centre market has attracted IDR 385.8 trillion (USD 24.4 billion) in identified investment across 49 facilities (27 operational, 12 under construction, 10 planned), encompassing 3,089 MW of capacity (526 MW operational, 2,563 MW pipeline). Three fiscal instruments apply: a CIT holiday of up to 20 years (PMK-130/2020); a post-holiday investment allowance of 30% of capex under GR No. 45/2019; and VAT plus import duty exemptions for Batam Nongsa Digital Park SEZ operators. Total cumulative fiscal cost is estimated at **IDR 130.659 trillion (USD 8.27 billion)**, equivalent to **0.590% of 2024 GDP** and 19.5% of the annual government education budget.

Table 1 — Annual and Cumulative Fiscal Cost by Instrument

Taxable income proxied at 12% ROIC. CIT forgone: 22% for non-GMT operators ($n = 28$), 7% net for GMT-subject MNEs ($n = 21$) after the QDMTT floor (PMK-136/2024, effective 1 Jan 2025). Post-holiday investment allowance applies to non-GMT entities only; QDMTT recaptures all saving for GMT operators. SEZ VAT and import duty are one-time costs at construction.

Table 1 Annual and Cumulative Fiscal Cost by Instrument (IDR Trillion; 2024 GDP = IDR 22,139T)

Year	CIT Holiday	Super Ded. ^a	Annual Total	% GDP	Cum. Total	Cum. % GDP
2025	4.024	—	4.024	0.018%	5.001	0.023%
2027	7.642	0.012	7.654	0.035%	17.927	0.081%
2030	7.366	0.090	7.456	0.034%	40.530	0.183%
2035	5.695	0.395	6.090	0.028%	74.311	0.336%
2040	4.186	0.483	4.669	0.021%	99.899	0.451%
2045	2.345	0.384	2.729	0.012%	119.782	0.541%
<i>Cumulative (all periods)</i>	118.705	10.977	—	—	130.659^b	0.590%

^a Post-holiday 5-year window: 2 years at 11% CIT + 3 years at 22% CIT. Zero net cost for GMT entities (QDMTT recapture Zero during holiday (double-dipping prohibited, PMK-153/2020 Art. 7).

^b Includes SEZ VAT (IDR 0.796T) and import duty (IDR 0.181T), one-time at construction. GDP: BPS 2024. Education APBN 2024 (IDR 670T). Rate: IDR 15,800/USD.

Table 2 — Policy Scenarios

Scenario A: expansion to 3,000 MW operational by 2030 (+2,474 MW from current 526 MW operational), requiring IDR 274.6T at IDR 111B/MW; GMT/non-GMT split 43%/57%; 10-year holiday. **Scenario B:** universal VAT and import duty extended to all operators (35% equipment share), evaluated on the same 3,000 MW/IDR 660.4T investment base as Scenario A; presented as an incremental effect on top of Scenario A.

Table 2 Fiscal Cost Under Alternative Scenarios

Scenario	MW	Inv.	CIT	SD	VAT+Duty	Total (IDR T)	% GDP
Baseline	3089	385.8	118.705	10.977	0.977	130.659	0.590%
A: 3,000 MW by 2030	+2474	+274.6	+51.243	+7.813	—	+59.056	+0.267%
<i>Scenario A total</i>	3000	660.4	169.948	18.790	0.977	189.715	0.857%
B: Universal VAT + Duty	3000	660.4	—	—	+30.227	+ 30.227	+0.137%
Combined A + B	3000	660.4	169.948	18.790	31.204	219.942	0.993%

CIT/SD/VAT+Duty all in IDR T (cumulative). Scenario A assumes no new SEZ concessions. Scenario B incremental VAT + Duty (universal, on 3,000 MW base): IDR 30.227T (VAT 25.425T + duty 5.779T). Combined A + B total: IDR 219.942T (0.993% of GDP).

MW = planned full capacity. Investment = planned investment where available. Galaxis excluded.

B Modelling Assumptions

Table 5 Key Modelling Assumptions

Parameter	Rationale	Value
<i>Financial</i>		
ROIC	DCI Indonesia (IDX: DCII) 2023 ROIC 14–16%; global DC sector 8–15%	12%
Exchange rate	Bank Indonesia 2024 annual average	IDR 15,800/USD
<i>CIT holiday</i>		
Non-GMT forgone	No QDMTT floor; full statutory CIT rate	22%
GMT forgone	Net of 15% QDMTT floor (PMK-136/2024, effective 1 Jan 2025)	7%
50%-reduction tier	IDR 100B–500B investment bracket	11%
Holiday duration	<IDR 100B: 0 yr; 100B–500B: 5 yr (50%); 500B–1T: 5 yr; 1T–5T: 7 yr; 5T–15T: 10 yr; 15T–30T: 15 yr; >30T: 20 yr	See tier
<i>Super deduction (GR 45/2019)</i>		
Investment allowance	5%/yr $\times$ 6 yr = 30% cumulative	5%/yr
Concurrency	PMK-153/2020 Art. 7: prohibited during CIT holiday	Zero during holiday
GMT post-holiday	QDMTT recaptures all base-erosion CIT saving	Zero net cost
Post-holiday window	2 yr at 11% (transition) + 3 yr at 22% (full)	5 years
<i>SEZ incentives</i>		
Equipment share	Capital equipment as share of total capex	35%
VAT rate	UU No. 7/2021	11%
Import duty	Blended rate, IT and electrical equipment	2.5%
<i>Scenarios</i>		
Scenario A: benchmark	Blended database ratio	IDR 111B/MW
Scenario A: GMT/non-GMT	Mirrors current database	42.9%/57.1%
Scenario A: holiday	New entrants	10 yr
Scenario B: VAT + Duty base	35% of Scenario A investment (660.4T)	IDR 231.1T
<i>Macroeconomic references</i>		
GDP 2024	BPS preliminary estimate	IDR 22,139T
Education budget	APBN 2024	IDR 670T

Sensitivity: ± 3 pp ROIC alters annual CIT by $\approx$ IDR ± 0.6 T. ± 5 pp equipment share alters SEZ costs by $\approx$ IDR ± 0.1 T. Treating pre-2025 holiday years for GMT operators at full 22% raises total cost by $\approx$ IDR 8–10T.
