Fiscal Scenarios: Cost Projections (A & B)

Scenario A — MW Expansion to 3,000 MW (2030)

Scale cost/MW from 526 MW base: IDR 4.35B/MW/yr × 3,000 MW

Metric	Value
Current MW	526 MW
Current annual cost	IDR 2.29T
Cost per MW	IDR 4.35B/MW/yr

% 2024 GDP	0.059%
% 2030 GDP (est.)	0.039%
Lifetime total	IDR 118.3T

Upper bound: operational base skewed to non-P2 entities (22% CIT forfeiture); future facilities include P2 in-scope operators at 7%.

Scenario B — VAT Exemption to All UC Facilities

Extend 35% × 11% VAT rule beyond SEZ to 11 UC non-SEZ sites.

Facility	VAT (IDR T)

Key Assumptions

A. Investment values

Announced USD figures converted at USD/IDR 15,500. MW-based imputation used where monetary data absent (USD 1.5M/MW operational, USD 2M/MW planned).

B. Profitability

Annual EBIT = 12% of total investment. Applied uniformly as a sector benchmark for fiscal cost computation.

C. Tax Holiday (PMK 69/2024)

CIT = 22%. Tiers: $\geq$ IDR 100T $\rightarrow$ 20 yrs; IDR 30T–100T $\rightarrow$ 15 yrs; IDR 500B–30T $\rightarrow$ 10 yrs; IDR 100B–500B $\rightarrow$ 5 yrs; $<$ IDR 100B $\rightarrow$ 0 yrs. 50% reduction for 2-yr extensions where applicable.

D. BEPS Pillar Two

In scope: global group revenue $>$ €750M AND operating/EBITDA margin $>$ 10%. GloBE minimum rate = 15%. P2 in-scope: Indonesia forfeits 7% (22%–15%). P2 out-of-scope: Indonesia forfeits full 22% (or 11% for 50% reduction facilities).

E. Super Deduction (PP 78/2019)

30% net income reduction over 6 years at 5%/yr. Applies after tax holiday ends. Data centres qualify under KBLI 63111. Fiscal cost = deduction $\times$ CIT-forfeited rate $\times$ 6 yrs. Annual deduction = 5% of investment.

F. SEZ VAT Exemption

4 facilities in Nongsa Digital Park KEK (Batam). VAT cost = investment $\times$ 35% $\times$ 11% (PMK-131/2024: 12% $\times$ 11/12).
